Aims of the workshop

Biotech drugs are among the major players in new frontiers of medicine. Whether macromolecules as antibodies and recombinant proteins or the most innovative cell-based medicinal products are concerned, we are facing an epic challenge in the health care system. We are moving towards a personalized and precision medicine with more patient-specific

drugs, through the research and development of new biomarkers, in order to select the population of patients that better respond to these new therapies. The aim of the event is to offer a comprehensive overview of biotech drugs, from R&D to production, clinical research and market.
